

END OF YEAR STATISTICS REPORT WORKGROUP ITT

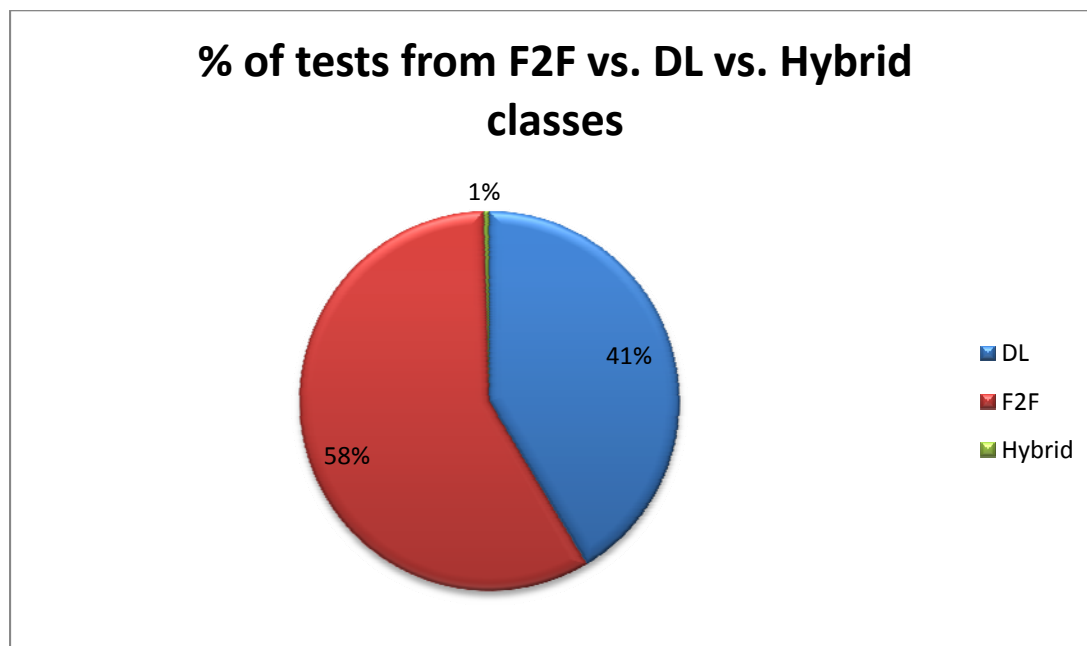

Fiscal Year 2011 (July 2010-June 2011)

1. Computing & Testing Center Highlights

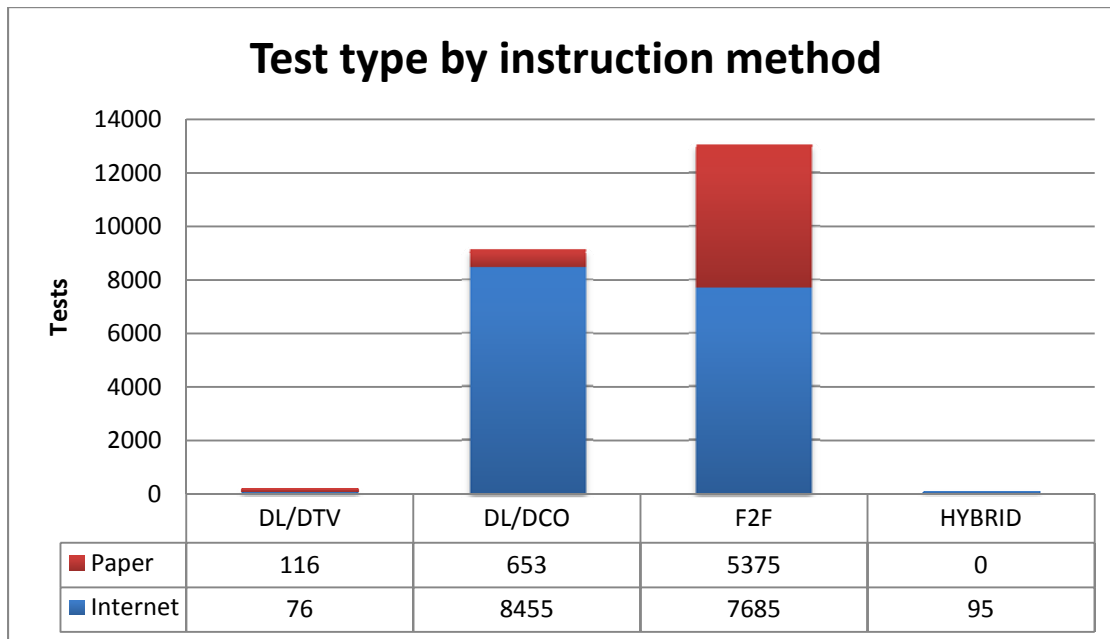

Tests administered this year

	FY2011
Total Placements for UH System	5,273
Placements for non-UH	27
Paid placement retests	731
Total Academic Tests for UH System	22,454
Non-UH Academic Tests	183
TOEFL Tests Taken	103

Since the 3Q 2010 CTC started parsing out academic course tests by instruction method. For this year, 58% of the tests administered for the entire UH system (13,060 out of 22,455) were for F2F classes.

58% of tests administered for F2F classes were via the internet (FY-Trends-toFY2011.xls), requiring in-lab proctoring.

DL/DTV=Distance Learning/Cable TV

DL/DCO: Distance Learning/Completely online

F2F: Face to Face

Hybrid: Combination of DL and F2F on customized schedule

F2F faculty have been bringing their paper tests to the testing center for proctoring and also have been putting their tests on LauLima, sending their students to the testing center. The rationale we have heard includes 1) more time available for instruction, 2) online testing is more environmentally sustainable, and 3) KCC wishes to have more instruction online and this includes online testing.

Due our marketing campaign to prepare for finals in Spring 2011 we saw a significant drop in testing demand due to F2F instructors administering their tests themselves. Since, for the year, 58% of our tests were for F2F classes we may wish to consider purposefully reducing services for F2F classes to keep demand for the center's services manageable. The Vice Chancellor for Academic Affairs has discouraged F2F instructors from using the testing center during finals.

Of course, this kind of strategy would be executed IN ADDITION to growing the test seat capacity to accommodate current growth trends and for planned growth in distance education.

Faculty usage of services

Academic testing

Instructors using service: 257

Courses using service: 222

Number of course sections (CRNs) using service: 1,507

Scantron scoring service

Tests scored: 360 (Business, Culinary, Math/Science, Nursing)

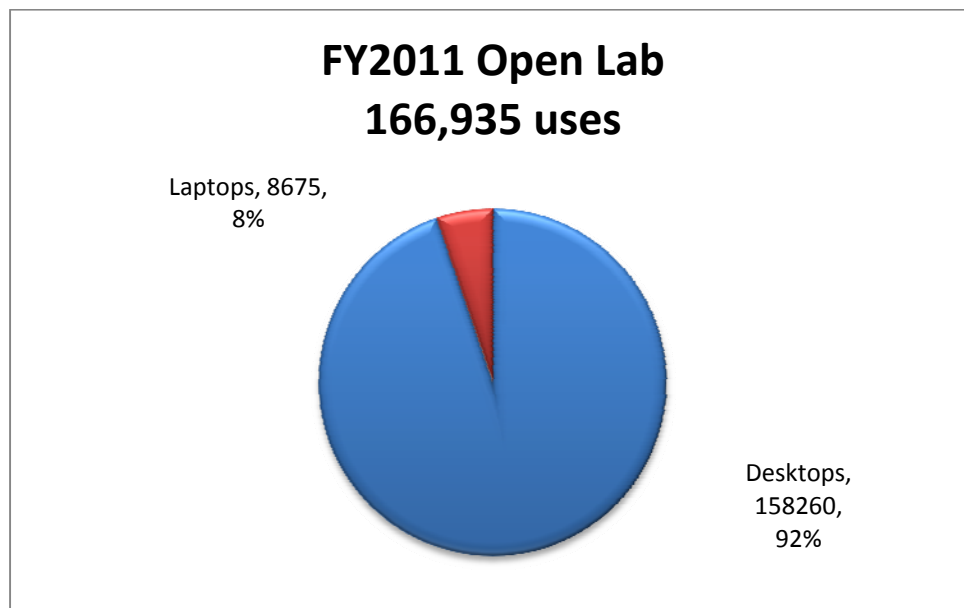

Wireless connections serviced this year: 4,290

CTC continues to support new wireless devices, requiring continuous learning for new technologies. These include, aside from the usual Windows, Mac, and Linux laptops and netbooks, iPhones, iPads, iPods, Android OS phones, and tablet PCs running Linux operating system.

2. Public PC (DTNS and CTC open lab) usage information:

Service location	Total uses
Lama desktops (DTNS)	158,260
Laptop checkouts (DTNS)	8,675
Total	166,935

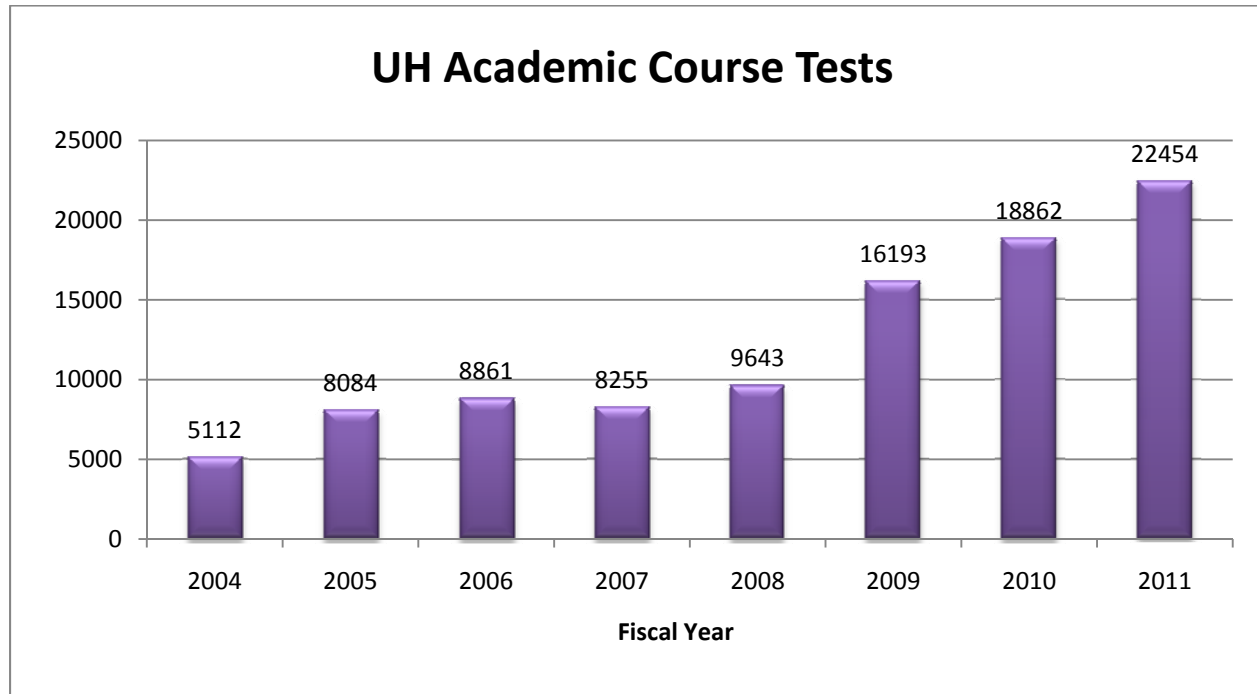

Out of a total of 166,935 open lab PC uses, 92% were on desktops (OpenLabAnnualOverviewData.xls).

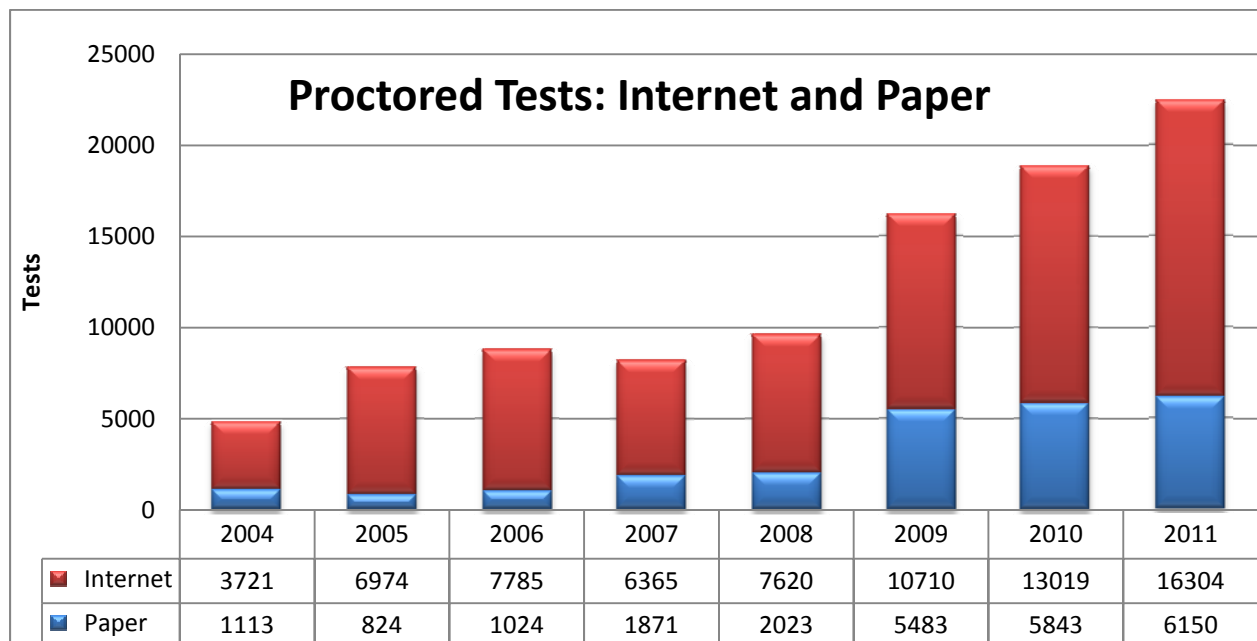

TRENDS OVER YEARS

Computing & Testing Center Trends

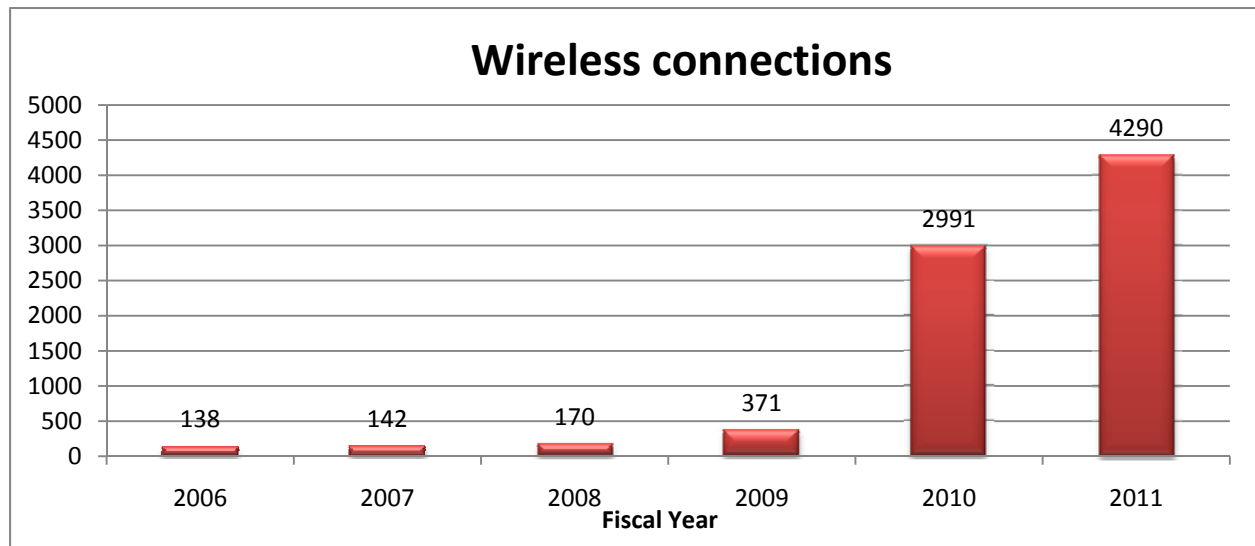

1. FY 2003-2011: UH academic course tests have increased since 2003, and 19% since 2010 (FY-Trends-toFY2011.xls).

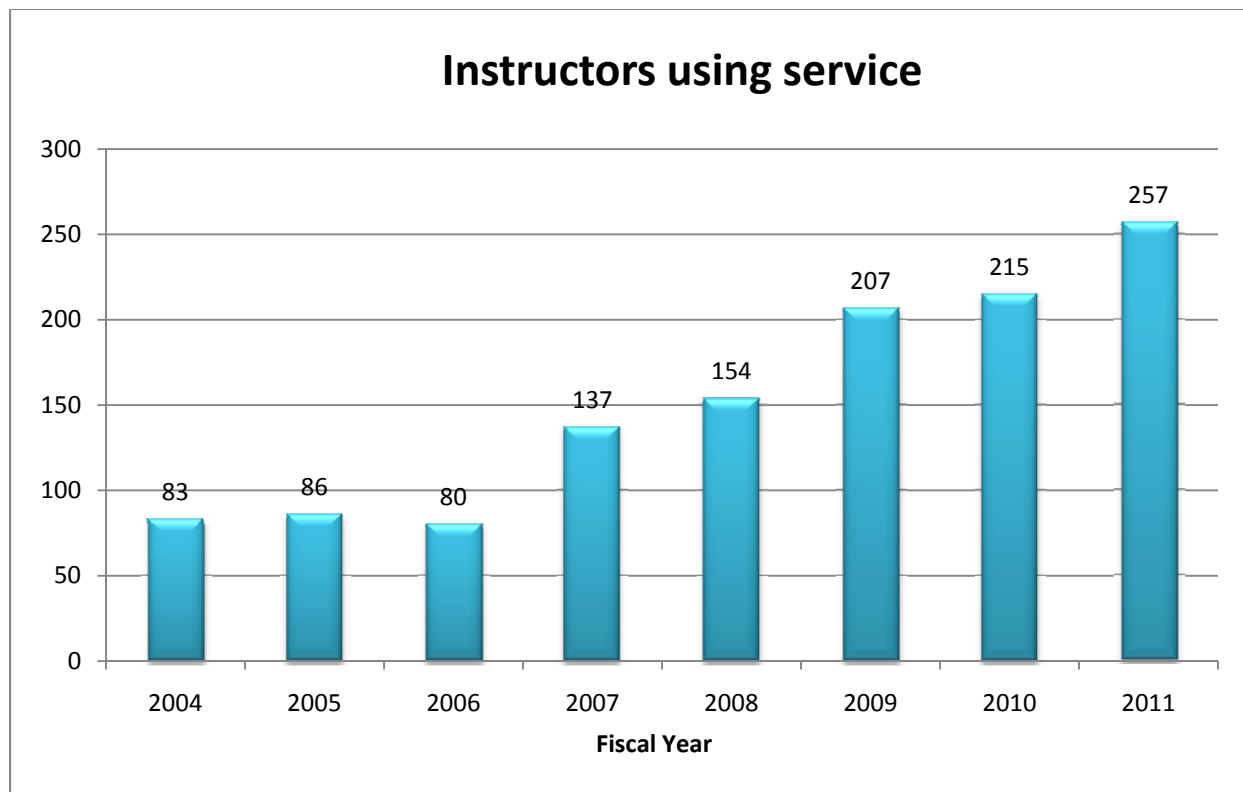

2. FY 2003-2011: Internet based testing is increasing 25% over 2010 (FY-Trends-toFY2011.xls).

3. Assumption of wireless activation services from CELTT has led to a marked increase in services provided. CTC is activating wireless connections for a wide range of net and phone devices (FY-Trends-toFY2011.xls). This growth should stop as soon as ITS implements wireless authentication system-wide.

4. The number of instructors using CTC services continues to grow (FY-Trends-toFY2011.xls).

Open Lab Trends

1. Chart reflecting activity from various service points for open lab since 2004. Data collection on library desktops started 6/2008. Open lab usage has decreased by 13% since FY 2010. However, the library was closed during Christmas and Spring breaks (OpenLabAnnualOverviewData.xls).
