

Corporate Body NAR Key

- 1) 110. The authorized access point for a corporate body. This access point is **valid** for use in bibliographic records. This is the access point that should be used in the bibliographic record when a creator access point (110), subject access point (610), contributor/other creator access point (710), or series creator access point (810) is given for this particular corporate body during the time it was/is known by this name.
- 2) 410. These access points are **not valid** for use in bibliographic records. These are variant forms of the name access point contained in the 110 field. These 410s generate “see” references in the online catalog that take the catalog user from these variant forms to the authorized form or forms (where the user will find collocated all of the works by this corporate body during the time it bore this name).
- 3) 510 (without \$w). This access point is **valid** for use in bibliographic records. This field contains an authorized access point for a RELATED BODY (i.e., related in some way to the body whose name access point is in the 110 field). This 510 generates a “see-also” reference in the online catalog that takes the catalog user from this authorized access point (where works emanating from this body are collocated) to the authorized access point in the catalog where all of the works emanating from the body in the 110 field are collocated.
- 4) 510 (with \$w = a or \$w = b). These access points are **valid** for use in bibliographic records. This field contains an authorized access point for an EARLIER (\$w = a) or LATER (\$w = b) authorized form of this corporate body’s currently authorized name (i.e., the one in the 110 field). This 510 generates a “see-also” reference in the online catalog that takes the catalog user from this authorized access point (where the works emanating from the body when it had this authorized access point are collocated) to the authorized access point in the catalog where all of the works emanating from the body when it bore the name contained in the 110 field are collocated.
- 5) 368-378. These are further details recorded about a corporate body per the rules in 11.3-11.11. Some of them may also be recorded as part of the authorized access point in 110.
- 6) 667 note. This is a public note that displays in the online catalog (along with the see and see-also links) when a user clicks on the link for access point whose authority record contains a 667 note.
- 7) 670 note. This is a non-public note seen by catalogers (i.e., it doesn’t display in the online catalog). The first 670 always represents the “work cataloged,” i.e., the work you are cataloging that caused you to create this NAR Additional 670s may be added to record other resources consulted by the cataloger and additional information found there about the corporate body.
